Concept Note

Soft computing is a group of computational techniques based on artificial intelligence (human like decision) and natural selection that provides quick and cost effective solution to very complex problems for which analytical (hard computing) formulation do not exist. The components of soft computing include machine learning, fuzzy logic, evolutionary computation and probabilistic theory. These components have the cognitive ability to learn effectively. They deal with imprecision and good tolerance of uncertainty. The purpose of this webinar is to develop the basic understanding of soft computing technique and its different applications.
